Product Description

The integrated pneumatic baler is an efficient and convenient packaging tool widely used in various industries for packaging operations.

Efficiency: The integrated pneumatic strapping machine integrates functions such as bundling, biting, and cutting, making operation simple and fast, greatly improving strapping efficiency.

Wide applicability: Suitable for multiple industries such as steel, aluminum, brick factories, cotton mills, building materials, etc.

Operation steps:

First, use a pneumatic strapping machine to wrap the steel strip around the packaging material, leaving an appropriate tail length. Further tightening: The steel strip is tightened to the appropriate tightness by driving it with a pneumatic motor. Then use a packing buckle to clamp onto the steel strip, while cutting off any excess packing tape. Finally, remove the already joined packing tape and complete the packing operation.
